HELLA ROKLUME 380 N

The high power, heavy-duty driving light for the ultimate front lighting upgrade

The RokLUME 380 N Pencil Beam Driving Light from HELLA offers exceptional long-distance visibility, with the flexibility to adjust the angle of each light independently, compared to the fixed angle of a single conventional light bar.

The HELLA RokLUME 380 N provides a powerful 7,500 lumens output, more than double the light of a comparable xenon driving light. Its 5,000 Kelvin colour temperature is closer to natural light than most light bars and kinder to the human eye, reducing operator fatigue and improving safety.

With a mining pedigree, the RokLUME 380 N is built to tackle the toughest conditions. It features an impact-resistant, hard-coated polycarbonate lens and anti-corrosion aluminium housing with a tough NanoSafe coating, and a heavy-duty bracket featuring the innovative Nord-Lock screw system to minimise vibration even on corrugated roads.

The RokLUME's unique thermal design ensures that light output will not scale back and its advanced electronics will not interfere with communications and radios.

RokLUME 380 N LED Driving Light

Beam distance in metres. Test conducted with dual RokLUME 380 N lights.
